

Pressure transducers type E-ATR-8

analog, for open and closed loop systems

E-ATR-8 pressure transducers measure the static and dynamic pressure of the hydraulic fluid, supplying a voltage or current output signal.

The sensor is composed by a thin-film circuit (1), with high resistance to overloads and pressure peaks.

The integrated electronic circuit (2) supplies an amplified voltage or current output signal, proportional to the hydraulic pressure, with thermal drift compensation.

E-ATR-8 equip pressure control digital proportional valves with integral transducer and electronics, REB/RES execution (see tech table GS205).

They are also used in association with other Atos digital proportionals to perform closed loop pressure controls:

- variable displacement axial piston pumps, PE(R)S execution (see tech table A170)
- directional control valves with additional closed loop pressure control, SP and SF options on TES/LES execution (see tech table GS212)

Features:

- Factory preset and calibrated
- Standard 5 pin M12 main connector (3)
- IP67 protection degree
- CE mark according to EMC directive

3 INSTALLATION AND COMMISSIONING

3.1 Warning

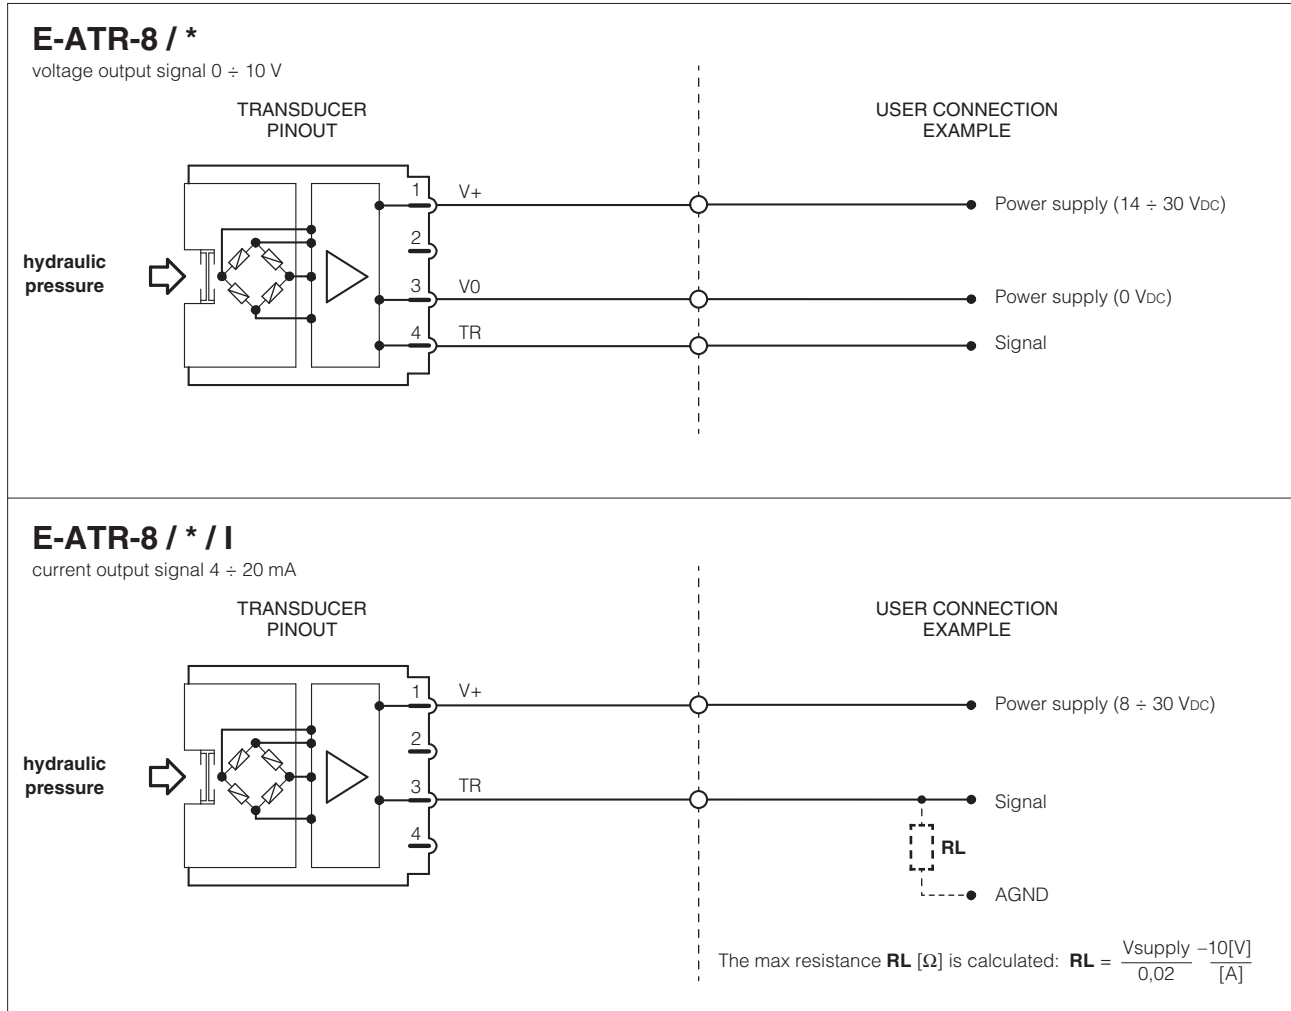

E-ATR-8 transducers have to be installed as near as possible to the point where the pressure have to be measured, taking care that the oil flow is not turbulent.

3.2 Commissioning

Install the transducer in the hydraulic circuit.

Switch-off the power supply before connecting and disconnecting the transducer connector as shown in scheme 4.
